

MOTOR MOUNT

ABSTRACT OF THE DISCLOSURE

5 A motor assembly for a telescopic leg includes a drive shaft extending therefrom and at least one mounting pin extending from the motor assembly in a direction generally parallel to and spaced from the shaft. A base to which the motor assembly is mounted includes an aperture having a polymeric grommet positioned therein for receiving the pin for providing a noise isolating interconnection of the motor assembly to the base. In a preferred embodiment, a plurality of spaced pins are provided and extend through a plurality of aligned polymeric grommets in the base.
